How to make your dysphagic residents a safe drink

Do you think it takes too long to make a safe drink with thickener from tins?

If so, you are not alone. It's difficult to mix into drinks and make them to the consistency a Therapist has prescribed.

Fortunately, you can use Slō Drinks to stop this problem. They replace the time consuming, old fashioned and unreliable tins of thickener traditionally used to make thickened drinks. To ensure every drink is at a prescribed consistency. How?

They are supplied ready to use in a "just add water" format. A precise quantity of thickener and drink flavouring already in the cup.

To make a drink all a carer has to do is stir. Carry on stirring whilst adding water up to a small dashed line on the side of the cup. Stir for a minute and leave. 1 minute for cold drinks, 4 minutes for hot.

Then pass it over confident they have added the right amount of water. Stirred it for the right amount of time and it is ready to drink.

Now – to guarantee your resident has a drink at the consistency prescribed – just tell them, which colour cup to use! White, beige or brown. Isn't that much easier than wasting hours trying to explain what you mean by "make it syrup, custard, or pudding" consistency?

It's this simplicity and ease of preparation that dramatically reduces the risk of your resident having a potentially dangerous drink. Stops them suffering with a painful coughing fit.

What's more, this new higher – safer level of consistency compliance is easy for you to maintain and manage. Training new carers takes minutes and the coloured cups tell you if your residents drinks are safe for them to swallow.

It is for these reasons Hospitals, Clinicians in the community and Nursing Homes – *hot and cold drinks are available on prescription* – are using Slō Drinks. To provide their residents with safe drinks that will help them through their rehabilitation and beyond.

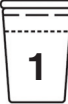

Something you can do for your residents by asking their GP and Therapists to prescribe Slō Drinks.

How Slō Drinks work

A strictly controlled and automated process guarantees Slō Drinks meet a set standard. So that each coloured cup contains a precise quantity of thickener.

As the cups become darker, more thickener is added.

So when water is poured in, the drink will flow at a specific speed. One that matches the National Descriptors Fluid Consistencies.

Cups	Consistency	Cold Drinks	Hot Drinks
 1 White	Flows as slowly as syrup	Blackcurrant Orange Lemon	Hot Chocolate White Coffee
 2 Beige	Flows as slowly as custard	Blackcurrant Orange Lemon	Hot Chocolate White Coffee
 3 Brown	Flows as slowly as a pudding	Blackcurrant Orange	Not Available

Why will your residents enjoy drinking them?

Simply . . . our unique thickener dissolves very quickly. No lumps float on top of these drinks. Consequently, they are as tempting to look at as ordinary "un-thickened" drinks.

They are also incredibly smooth to swallow. Leave the mouth clear and "grit" free. Your residents can just enjoy the full flavour of a refreshing cold juice drink or a comforting hot one. Like other Slō Drinkers who say:

"Orange is great . . . The Blackcurrant is tasty . . . I forgot I was drinking a thickened drink!"
