

**Pill-Eze is a Slō Drink** created to make it easy to swallow medicinal pills, capsules and supplements. It's a thickened liquid that holds them so they won't get stuck and its sweet cherry flavour makes them taste nice.

**Easy to use** - simply put a pill or capsule on a spoon and cover it with about 5mls of Pill-Eze, then swallow together and finish with water if necessary.

**Pill-Eze is suitable for all those with swallowing difficulties.** If diagnosed with dysphagia it is suitable for those on IDDSI level 1, 2 and fluids as it matches the IDDSI 3 (Moderately thick) flow rate.

It is virtually chemically inert and compares to the Ph level of the stomach (4.2pH) so can safely be used with a wide range of tablets and other solid dose forms.

It has been subjected to over 100 scientific compatibility studies and as a result with the exceptions of: effervescent and crushed tablets; rapid dissolving, sustained release medication or those containing Iodine - you can use Pill-Eze with pills, tablets and (liquid containing) capsules, vitamin preparations, food supplements and other solid dosage forms meant to be swallowed

**Before using:** Check the consistency and ingredients are suitable for the drinker. If in doubt, consult a Doctor, Clinician or Pharmacist. For oral consumption only. For 3 years+. Avoid contact with eyes. If the drinker is pregnant or breast-feeding, check with a healthcare professional it is suitable. It is not recommended that you crush rapid- dissolving, coated or sustained medication or open capsules. If you do carefully read the instruction leaflet that comes with them and/ or consult a healthcare professional.

**Ingredients:** Purified water, modified food starch, natural cherry flavour, sodium citrate, citric acid, sucralose, sodium benzoate (<0.1%), malic acid, simethicone.

**Allergens & Intolerances:** None

**Osmolality:** <50 mOsmol/kg

**Ph:** 4- 5
